1.0 Summary of Traffic Data Collection Activities and Analysis

1.1 Background

The Northwest Territories highway network consists of 2200 kilometres of all-weather roads and 1300 kilometres of winter roads. The highway system also includes five vehicle ferries. A map of the highway network is provided in Figure 1. A detailed listing of the highway system classification by surface type is provided in Table 1. It is noted that, an additional 800 km of winter road are constructed by mining companies to facilitate mine re-supply.

The Department of Transportation of the Government of the Northwest Territories is responsible for operation and maintenance and the capital rehabilitation and upgrading of the Northwest Territories highway network. To monitor traffic utilizing the highway system, the Department of Transportation operates a series of mechanical counters and conducts periodic visual counts and surveys. Information obtained from these counts is used by the department to monitor changes in traffic flows, to classify highways, to set priorities in maintenance and capital funding, to monitor safety aspects of the highways and to optimize engineering designs. Traffic data is also used by businesses and the general public as the need arise.

This report presents the highway traffic data collected by the Department of Transportation on the territorial highway network in both 1993 and 1994. This report includes traffic information collected on major highways, access roads and winter roads. The report also contains information on vehicle classifications and turning movements at selected intersections.

This report is the second annual traffic data report prepared by the Northwest Territories Department of Transportation. A number of items have been added to this report compared to the 1993 version, including a table on opening and closing dates for ice bridges, a table and graph noting vehicle-kilometres travelled on Northwest Territories Highways, and a table noting truck traffic on select mine access roads. Graphs of the traffic distributions at each traffic counter have been added to the report in Appendix A.

1.2 Traffic Data Collection System

In 1996, the Department of Transportation collected traffic from 54 permanent and seasonal counting stations. These stations provide hourly information on traffic for the complete year, or selected portions of the year for counters located on winter roads or other seasonal access roads. These stations are positioned to capture the general flow of traffic on the highway network. Counter locations are provided in Table 2 and illustrated in Figure 1.

Vehicle classification information is collected at the five highway ferries. The Marine Services Division of the Department of Transportation is responsible for collecting and processing this information.

Special turning movement counts at select intersections and visual vehicle classification counts are also conducted annually or as the need arises.

Notes: Changes from 1996 to 1997

1.3 Traffic Data Processing Procedures

The permanent traffic counters located throughout the Northwest Territories highway network collect traffic data on a continual basis. This data is stored on a recording device (module) every hour. Approximately once per month, personnel working out of the highway maintenance camps replace the data modules, they retrieve the module with the prior month's traffic count and replace it with an empty module.

The retrieved module is then sent to Hay River, where personnel with the Highways and Engineering Division download the data from the module to disk (ASCII format) and conduct a first level screening of the data. Any problems are noted in a summary report and corrupt data is disregarded. The disks and summary report are then sent to the Transportation Planning Division in Yellowknife where the data is uploaded into a Microsoft Excel spreadsheet and analysed to obtain the information presented in this report.

The first step in the analysis of the traffic data is to check for completeness and accuracy. Common problems include missing data due to the counter or module not functioning correctly, overlapping or missing data between months, and counts too high or low due to counter malfunctions. To ensure accurate results and also provide as much information as possible, a series of procedures has been established to correct deficiencies in the data. These steps are outlined below. Estimated data is noted as such.

- If less than one week of data is missing, an average of the hourly count in the week prior and the week following is calculated and applied to the missing data.
- If over one week of data is missing but less than a month, the first step is to obtain the data from the previous year. If the data cannot be found, an average of the first prior week and the first following week is calculated and applied to the missing data.
- If over one month of data is missing, data from the previous year is applied to the missing data, if available. If this data is not available then the data is left blank.
- If 3 or more months are missing, or greater than 40% of the data is missing after all previous and following years data have been added and the procedures noted above have been conducted, the counter is considered to have insufficient data to estimate the average annual daily traffic.
- In the "Input Data" tables provided in Appendix A only 1994 data is shown; if there is at least one day of every weekday present in a month, then the month's weekday volumes are presented.

1.4 Glossary of Terms

Average Annual Daily Traffic (AADT) is an estimate of the mean daily traffic for a period of one year.

Average Daily Traffic (ADT) is an estimate of the mean traffic for a specified period of time. For example, monthly ADT is an estimate of the mean daily traffic for a specified month.

Near Urban Highway is a section of highway located within or near a major urban centre.

Peak Summer Average Daily Traffic (PSADT) is an estimate of the mean daily traffic for the months of June, July and August.

Permanent Traffic Counter is a counter that is permanently placed at a specific location and counts traffic continuously.

Rural Highway is a section of highway located away from the traffic influence of a major urban centre.

Short Term Counts provide measurements of traffic characteristics based on visual observation for a specified period of time and purpose.

Traffic distributions illustrate how traffic varies over time. Distributions may be by month, by day of the week or hourly, and is usually measured as a percent of the AADT.

Vehicle Classification is the distribution of vehicle types in a traffic stream.

Vehicle Kilometres Travelled is the total number of vehicles for a specific road segment multiplied by the length of the road segment.

1.5 Layout of the Report

This report is organized into five sections.

The first section provides an introduction to the Northwest Territories traffic data collection system.

The second section presents the traffic information collected at all permanent counter locations; including traffic volumes, distributions and vehicle kilometres travelled.

The third section presents vehicle classification information collected at highway ferries and through short term counts.

The fourth section presents the results of the short-term counts. In 1994 this consisted of turning movement studies conducted at four intersections.

Additional detailed traffic information is presented in the appendices.

Table 3 Traffic on Northwest Territories Highways

Highway	Kilometre	Counter ID	Description	1993		1994	
				AADT	PSADT	AADT	PSADT

Table 10
Truck Traffic on Selected Winter Mining Roads (1)(2)

Winter Road	Total Estimated Tonnage (tonnes)	Total Estimated Number of Trucks
Lupin Mine (1)	30,000	1004
Mineral Exploration Traffic	24,000	726
Colomac Mine (2)	47,000	1500

(1) Lupin data provided by Echo Bay Mines Ltd for January - March, 1994.

(2) Colomac data obtained from Chamber Of Mines
for January - March, 1995.

See Figure 1 for the location of these two winter roads.
